Art Unit: 2176

DETAILED ACTION

This is a **Non Final** Rejection in response to the RCE filed on 08/02/2007. Claims 35-54 are pending. Applicant has cancelled claims 1-34, and adds new claims 35-54. Claims 35, 42 and 49 are independent claims, Effective filing date 12/03/2003 (HP).

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/02/2007 has been entered.

Claim Objections

Claim 48 is objected to because of the following informalities:

All paragraphs in the claims, which follow the "New" The method of claim 1,
however, claim 1 has been cancelled from consideration due to Applicant
amendment filed 08/02/2007. In the interest of compact prosecution, the
application is further examined against the prior art, as stated below, upon the
assumption that claim 48 is depend upon independent claim 42.
 Appropriate correction is required.

Art Unit: 2176

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 35-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Kloosterman</u> et al. US 20040066527A1 – filed 10/02/2002 [hereinafter "Kloosterman"], in view of <u>Kueny</u> US007020837B1 filed 11/29/2001 [hereinafter "Kueny"].

Regarding independent claim 35, Kloosterman teaches:

A processor-readable medium comprising processor- executable instructions for generating a PPML (personalized print markup language) document, the processor-executable instructions comprising instructions for: marking a first PDF document to create a PPML template, wherein portions of the first PDF document are marked to become variables in the PPML template and other portions of the first PDF document are marked to become a background in the PPML template;

(See Kloosterman at Page 4 Para 32-35, discloses the raster image processor (RIP) where the Job Doc Page Mark (PDF Objects) on every page in the VDP (Variable Data Print), the VDP is a portion of PPML/VDX, and the VDP composes a template

Art Unit: 2176

consisting of static images, graphics and text as well as variable images, graphics and text (i.e. a print job could have a graphical box designated to contain a picture of an automobile for an advertisement to every person listed within a recipient database, the decision for the variable data that will be used for the automobile, where the marked file is .PDF.)

populating the PPML template with content and data, wherein the content and data are put into locations within the PPML template associated with the portions of the first PDF document marked to become variable, thereby creating the PPML document;

(See Kloosterman at Page 1 Para 8, discloses a page definition mark up language, called Personalized Print Markup Language (PPML) (i.e. PPML template).

Also, see Kloosterman at Pages 1-2 Para 10, discloses VDX is use to create the composite definition of PPML/VDX (i.e. PPML template).

Also, see Kloosterman at Page 4 Para 32-35, discloses the raster image processor (RIP) where the Job Doc Page Mark (PDF Objects) on every page in the VDP (Variable Data Print), the VDP is a portion of PPML/VDX, and the VDP composes a template consisting of static images, graphics and text as well as variable images, graphics and text (i.e. a print job could have a graphical box designated to contain a picture of an automobile for an advertisement to every person listed within a recipient database, the decision for the variable data that will be used for the automobile, where the marked file is .PDF.)

Art Unit: 2176

and printing the second PDF document.

(See Kloosterman at Page 10 Para 106, discloses Printing Device by Print Job and Update Finish Verification File 410, the PPML/VDX file and the associated Job Ticket/Finish Verification file will be used by the printing device to impose and print the job. The entire job is printed as described by the PPML for the page layout, the PDF objects for page content.)

Kloosterman does not expressly teach, but Kueny teaches:

A processor-readable medium comprising processor- executable instructions for translating the PPML document into a PDF (portable document format) document.

(See Kueny, Col. 1, Lines 45-50, discloses RIP Processor, and PDF.

Also, see Kueny Col. 2, Lines 40-65, teaching a technique for creating a compressed form of Adobe PDF from PPML (i.e. the compositing language using hereinafter is PPML).

parsing structures within the PPML document; generating a PDF document tree; populating the PDF document tree with objects identified when parsing the PPML document;

(See Kueny, Col. 2, Lines 40-65, teaching a technique for creating a compressed form of Adobe PDF from PPML (i.e. *the compositing language using hereinafter is PPML*), where the composite page description (i.e. PPML document) can be parsed efficiently into a single, random access data structure representing the entire assembly process.

Art Unit: 2176

Also, see Kueny, Col. 3, Lines 25-30, discloses each input static PDF file is opened and the PDF pages within the files are located, using the root and tree-structure.)

configuring a second PDF document according to the PDF document tree;

(See Kueny, Col. 3 Line 5 → Col. 4, Line 25, teaching each input static PDF file is opened and the PDF pages within the files are located, using the root and tree-structure, and each static page to be composite (PPML) into an new output page (i.e. second PDF).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Kloosterman's finishing verification printing method to include a means of translating the PPML document into a PDF (portable document format) document, parsing structures within the PPML document; generating a PDF document tree; populating the PDF document tree with objects identified when parsing the PPML document; configuring a second PDF document according to the PDF document tree of Kueny, because the PPML/VDX of Kloosterman with the a technique for creating a compressed form of Adobe PDF from PPML (i.e. the compositing language using hereinafter is PPML) of Kueny, produces a predictable result of utilizing the well known in the art include ASCII text, PDF-Express script, PPML languages where each resulting composite page (PPML document) is described separately. Within the description of each composite page, every placement of a PDF page from a static PDF (See Kueny col. 2, Lines 55-65.)

In addition, Kloosterman teaches:

Art Unit: 2176

Regarding independent claim 42, the rejection of claim 35 is fully incorporated.

providing tools to allow a user to mark a first PDF document to create a PPML template, including tools to mark portions of the first PDF document to become variables in the PPML template and tools to mark other portions of the first PDF document to become a background in the PPML template;

(See Kloosterman at Page 4 Para 32-35, discloses the raster image processor (RIP) where the Job Doc Page Mark (PDF Objects) on every page in the VDP (Variable Data Print), the VDP is a portion of PPML/VDX, and the VDP composes a template consisting of static images, graphics and text as well as variable images, graphics and text (i.e. a print job could have a graphical box designated to contain a picture of an automobile for an advertisement to every person listed within a recipient database, the decision for the variable data that will be used for the automobile, where the marked file is .PDF.)

Also, See Kloosterman at Page 1 Para 8, discloses a page definition mark up language, called Personalized Print Markup Language (PPML) (i.e. PPML template).

Also, see Kloosterman at Pages 1-2 Para 10, discloses VDX is use to create the composite definition of PPML/VDX (i.e. PPML template).

merge the PPML template with content and data, wherein the content and data are put into locations within the PPML template associated with the

Application/Control Number: 10/727,240 Page 8

Art Unit: 2176

portions of the first PDF document marked to become variable, thereby creating the PPML document;

(See Kloosterman at Page 4 Para 32-35, discloses the raster image processor (RIP) where the Job Doc Page Mark (PDF Objects) on every page in the VDP (Variable Data Print), the VDP is a portion of PPML/VDX, and the VDP composes a template consisting of static images, graphics and text as well as variable images, graphics and text (i.e. a print job could have a graphical box designated to contain a picture of an automobile for an advertisement to every person listed within a recipient database, the decision for the variable data that will be used for the automobile, where the marked file is .PDF.

Also, see Kloosterman at Page 4 Para 37, discloses the merge process.)

Regarding independent claim 49,

is directed a processor readable medium comprising processor executable instruction to perform the method of claim 42 which cites above, and is similarly rejected under the same rationale.

....

Art Unit: 2176

Regarding claim 36, Kloosterman teaches:

resolving tags found when parsing the PPML document referring to external objects by un-marshalling the external objects and inserting them within the PDF document tree.

(See Kloosterman at Page 4 Para 32-35, discloses the raster image processor (RIP) where the Job Doc Page Mark (PDF Objects) on every page in the VDP (Variable Data Print), the VDP is a portion of PPML/VDX, and the VDP composes a template consisting of static images, graphics and text as well as variable images, graphics and text (i.e. a print job could have a graphical box designated to contain a picture of an automobile for an advertisement to every person listed within a recipient database, the decision for the variable data that will be used for the automobile, where the marked file is .PDF.

Also, See Kloosterman Para 94, teaching Prepress 20 allows for a valid hierarchy of PPML/VDX tags and attributes to be entered as a variant.)

Regarding claim 37, Kloosterman does not expressly teach, but Kueny teaches:

interpreting the parsed structures from the PPML document for

attachment to locations on the PDF document tree.

(See Kueny, Col. 2, Lines 40-65, teaching a technique for creating a compressed form of Adobe PDF from PPML (i.e. *the compositing language using hereinafter is PPML*), where the composite page description (i.e. PPML document) can be parsed efficiently into a single, random access data structure representing the entire assembly process.

Art Unit: 2176

Also, see Kueny, Col. 3, Lines 25-30, discloses each input static PDF file is opened and the PDF pages within the files are located, using the root and tree-structure.)

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Kloosterman's finishing verification printing method to include a means of interpreting the parsed structures from the PPML document for attachment to locations on the PDF document tree of Kueny, produces a predictable result of utilizing the well known in the art include ASCII text, PDF-Express script, PPML languages where each resulting composite page (PPML document) is described separately. Within the description of each composite page, every placement of a PDF page from a static PDF (See Kueny col. 2, Lines 55-65.)

Regarding claim 38, Kloosterman teaches:

parsing both background and variable structures within the PPML document.

(See Kloosterman at Page 2 Para 14, discloses PPML/VDX instance is created by a data driven merge process referred to as a variable data merge engine. The merge engine typically executes within an authoring environment for variable data.)

Art Unit: 2176

Regarding claim 39, Kloosterman teaches:

assigning rules to govern operation of variables within the PPML template.

(See Kloosterman at Page 4 Para 32, discloses PPML/VDX templates rules.)

Regarding claim 40, Kloosterman teaches:

wherein the rules are configured as macros.

(See Kloosterman at Page 4 Para 32 and 38, discloses PPML/VDX templates rules, where author using the rules for the inclusion of variable objects (i.e. rules are configured as macros.))

Regarding claim 41, Kloosterman teaches:

marking text regions for substitution of alternate text; and marking image regions for substitution of alternate images.

(See Kloosterman at Page 4 Para 32-35, discloses the PPML/VDX, and the VDP composes a template consisting of static images, graphics and text as well as variable images, graphics and text (i.e. a print job could have a graphical box designated to contain a picture of an automobile for an advertisement to every person listed within a recipient database, the decision for the variable data that will be used for the automobile, where the marked file is .PDF.

Also, See Kloosterman Para 94, teaching Prepress 20 allows for a valid hierarchy of PPML/VDX tags and attributes to be entered as a variant.)

Art Unit: 2176

Regarding claims 43-48 respectively,

the rejections of claims 36-41 respectively are fully incorporated, and are

similarly rejected under the same rationale.

Regarding claims 50-53 respectively,

the rejections of claims 36, 38, and 40-41 respectively are fully

incorporated, and are similarly rejected under the same rationale.

Regarding claim 54,

the rejections of claims 38, and 40 are fully incorporated, and is similarly

rejected under the same rationale.

It is noted that any citations to specific, pages, columns, lines, or figures in the

prior art references and any interpretation of the references should not be considered to

be limiting in any way. A reference is relevant for all it contains and may be relied upon

for all that it would have reasonably suggested to one having ordinary skill in the art.

See, MPEP 2123.

Response to Arguments

The Arguments filed on 08/02/2007 has been fully considered but are moot in

view of the new ground(s) of rejection. This office action is a Non-Final Rejection in

order to give the applicant sufficient opportunity to response to the new line of rejection.

Application/Control Number: 10/727,240 Page 13
